

Duplex

Janitorial Steam System

The Janitorial Steam System comprises of a powerful steam cleaner called a Jet Steam Professional, Janitorial Trolley and Steam Mop supplied as one for a convenient cleaning solution. The Jet Steam Professional steam cleaner is a robust and efficient continuous flow machine which means that there is no downtime for refilling. This is due to the fact that this model has a boiler and a reserve tank so there is no need to de-pressurise to re-fill and lose valuable cleaning time.

The Janitorial Steam System is supplied with a comprehensive kit of tools and accessories which can be stored in the handy receptacles of the trolley which makes transporting the entire system from place to place in the working environment both quick and easy. These tools and accessories perform a wide range of cleaning tasks from steam cleaning with brush agitation to plug-hole unblocking, upholstery cleaning, grout cleaning, de-greasing of kitchen equipment and many more.

The steam mop of the Janitorial Steam System is a powerful tool to combine cleaning with infection control so is perfect for clinical environments such as vets, hospitals and dental surgeries.

Our range of steam cleaners offers premium quality technology. Their robust manufacture and design is based on extensive work with people who have demanding commercial and industrial applications.

We carry out free, on-site, no obligation demonstrations throughout the UK so that you can see for yourself how the Janitorial Steam System could fit into your busy cleaning schedule thus saving you time and energy.

This product is accepted on the Water Technology List. UK customers purchasing these products are rewarded through the Enhanced Capital Allowance (ECA) scheme. Cleaning with steam uses remarkably little water so the Janitorial Steam System is also good for the environment.

In our ever increasingly green world, chemical-free cleaning is here to stay so why not do your bit for the planet and arrange a demonstration today.
